

### 3.13.3 Potential Hazardous Waste Site Locations

The Hazardous Waste Initial Site Assessment utilized a government records database search to quantify the number of hazardous material/waste sites within a radius (1.6 kilometer/1.0 mile) deemed to have a potential to affect the location of the proposed alternative. Although these records are not updated consistently, they provide an overall historical use and disposal history of hazardous materials/waste for a particular area. Site locations are plotted for each alternative in the Hazardous Waste Initial Site Assessment; locations within the Corridor are provided in Figure 3.13.1. The numbers of hazardous materials/waste sites for each alternative are provided in Table 3.13.A. As seen in the table, some databases indicate that a hazardous material/waste release has occurred at the site; other databases indicate that hazardous materials/waste are stored and/or generated on site.

Table 3.13.B provides the area of agricultural land use for each alternative in the Corridor. Pesticide residue is associated with current and former agricultural land use.
