

A. MSHCP Conservation Area Description

would be required to determine if there is adequate representation in the MSHCP Conservation Area. The vast majority of the conserved lands in these Bioregions is natural vegetation. Urban and intensive agricultural lands account for less than 2% of the San Jacinto Mountains and Agua Tibia Mountains Bioregions and less than 15% of the Santa Ana Mountains and San Jacinto Foothills Bioregions.

**TABLE 4
ACREAGE AND PERCENT CONSERVATION IN BIOREGIONS**

Bioregion		Additional Reserve Lands	Existing Public/Quasi-Public Lands	Total Conserved	Rural/Mountainous	Indian Lands	Out	Total Acreage
Agua Tibia Mountains	acres	1,070	9,060	10,130	250	590	1,630	12,610
	%	8.5%	71.8%	80.3%	2.0%	4.7%	12.9%	
Desert Transition	acres	10,860	22,600	33,460	0	18,340	36,980	88,780
	%	12.2%	25.5%	37.7%	0%	20.7%	41.7%	
Riverside Lowlands	acres	85,900	80,920	166,820	47,430	8,650	466,880	689,780
	%	12.5%	11.7%	24.2%	6.9%	1.3%	67.7%	
San Bernardino Mountains	acres	850	9,140	9,990	3,650	8,370	6,980	28,990
	%	2.9%	31.5%	34.5%	12.6%	28.9%	24.7%	
San Jacinto Foothills	acres	49,690	22,550	72,240	15,330	4,190	19,990	111,750
	%	44.5%	20.2%	64.6%	13.7%	3.7%	17.9%	
San Jacinto Mountains	acres	11,120	122,880	134,000	11,130	2,620	39,170	186,920
	%	5.9%	65.7%	71.7%	6.0%	1.4%	21.0%	
Santa Ana Mountains	acres	6,450	79,360	85,810	39,650	0	14,430	139,890
	%	4.6%	56.7%	61.3%	28.3%	0%	10.3%
