

## Land Use Plan

“

*Communities should range in location and type from urban to suburban to rural, and in intensity from dense urban centers to small cities and towns to rural country villages to ranches and farms.*

”

- RCIP General Plan Principles

The Land Use Plan focuses on preserving the numerous unique features in the Elsinore area and, at the same time, guides the accommodation of future growth. To accomplish this, more detailed land use designations are applied than for the Countywide General Plan. Proposed uses represent a full spectrum of categories that relate the natural characteristics of the land and economic potential to a range of permitted uses.

The Elsinore Land Use Plan, Figure 3 depicts the geographic distribution of land uses within this area plan. The Plan is organized around 24 area plan land use designations. These area plan land uses derive from, and provide more detailed direction than, the four General Plan Foundation Component land uses: Agriculture, Rural, Open Space and Community Development. Table 1, Land Use Designations Summary outlines the development intensity, density, typical allowable land uses and general characteristics for each of the Area Plan land use categories within each Foundation Component. The General Plan Land Use Element contains more detailed descriptions and policies for the Foundation Components and each of the Area Plan land use categories.

Proposed uses represent a full spectrum of categories that relate the natural characteristics of the land and economic potential to a range of permitted uses. Many factors led to the designation of land use patterns. Among the most influential were the Riverside County Vision and Planning Principles, both of which focused, in part, on preferred patterns of development within the County; the Community and Environmental Transportation Acceptability Process (CETAP) that focused on major transportation corridors; the Multiple Species Habitat Conservation Plan (MSHCP) that focused on opportunities and strategies for significant open space and habitat preservation; established patterns of existing uses and parcel configurations; and current zoning. The result of these considerations is shown in Figure 3, that portrays the location and extent of proposed land uses. Table 2, Statistical Summary of the Elsinore Area Plan, provides a summary of the projected development capacity of the plan if all uses are built as proposed. This table includes dwelling unit, population and employment capacities.

## LAND USE CONCEPT

“

*Our communities - both improvements to existing ones and newly emerging ones - are models for new ways to provide and manage infrastructure, deliver education, access jobs, apply new technology, and achieve greater efficiency in the use of land, structure, and public improvements.*

”

- RCIP Vision

The Elsinore Area Plan reflects the RCIP Vision for Riverside County in several ways. It does so by intensifying and mixing uses at nodes adjacent to transportation corridors, by more accurately reflecting topography and natural resources in land use designations, by avoiding high intensity development in natural hazard areas, and by considering compatibility with adjacent communities' land use plans as well as the desires of residents in the plan area.

The land use designations maintain the predominantly rural character of the Meadowbrook and Warm Springs communities, the natural and recreational characteristics of the Cleveland National Forest, and mix of Rural and Community Development uses in Cleveland Ridge. Multipurpose Open Space and MSHCP components should be incorporated into the design of new and existing communities. In addition to providing habitat and recreational value, the
