

Multipurpose Open Space

The open space system and the methods for its acquisition, maintenance, and operation are calibrated to its many functions: visual relief, natural resources protection, habitat preservation, passive and active recreation, protection from natural hazards, and various combinations of these purposes. This is what is meant by a multipurpose open space system.

- RCIP Vision

The Highgrove planning area open spaces perform a multitude of functions, hence the label of “multi-purpose.” The point is that open space is really a part of the public infrastructure and should have the capability of serving a variety of needs and diversity of users. Highgrove’s natural open space resources are quite extensive and specialized. That means that each resource requires thoughtful preservation and, in some cases, restoration. This Multipurpose Open Space section is a critical component of the character of the County of Riverside and of the Highgrove area. Preserving the scenic background and natural resources of this special area gives meaning to the “remarkable environmental setting” portion of the overall Riverside County Vision. Not only that: these open spaces also help define the edges of and separation between communities, which is another important aspect of the Vision.

The appeal of the Highgrove area lies in its dramatic and expansive natural setting. The Highgrove area contains a unique open space network that encompasses a diverse variety of habitats, including riparian corridors, vernal pools, grasslands, foothills, mountains, wetlands, and agricultural fields. These open space areas provide visual relief, serve as habitat for plants and animals, provide recreational opportunities, and otherwise establish the area’s unique character. Open space areas also are important in protecting citizens from natural hazards.

Due in part to its proximity within the growing Inland Empire, the Highgrove area continues to experience growth and development pressures. Establishing a balance between preserving open space areas and accommodating additional population needs is essential to maintaining the open space and rural character of the area.

Policies:

HAP 17.1 Protect visual and biological resources in the Highgrove area through adherence to General Plan policies found in the Multipurpose Open Space Element, as well as policies contained in the Western Riverside County Multiple Species Habitat Conservation Plan.

A watershed is the entire region drained by a waterway that drains into a lake or reservoir. It is the total area above a given point on a stream that contributes water to the flow at that point, and the topographic dividing line from which surface streams flow in two different directions. Clearly, watersheds are not just water. A single watershed may include combinations of forests, glaciers, deserts, and/or grasslands.

LOCAL OPEN SPACE POLICIES

Floodplains and Watercourses

The Santa Ana River, Springbrook Wash, Riverside Canal Aqueduct, and Gage Canal serve as the major drainage areas for the Highgrove planning area. Due to the area’s mountainous terrain, there exists several other major drainage courses throughout the planning area. These and smaller perennial streams create a system of ever-changing channels within the Highgrove area, which gradually change its physical appearance.
